

CAMARA Brief

September, 2023

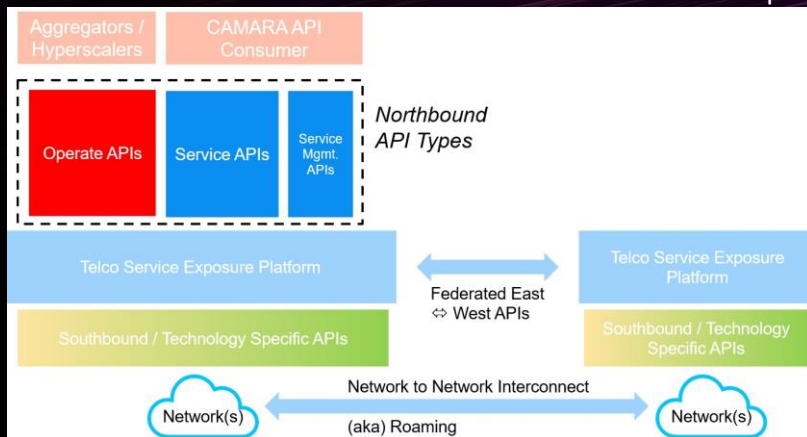

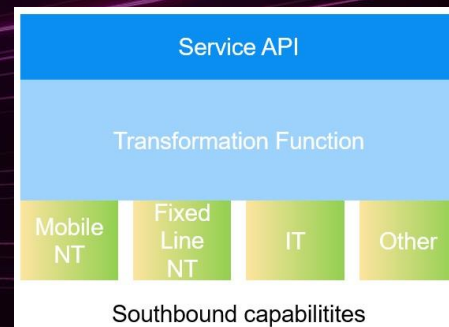

Scope

Source: Scope – Camara Project

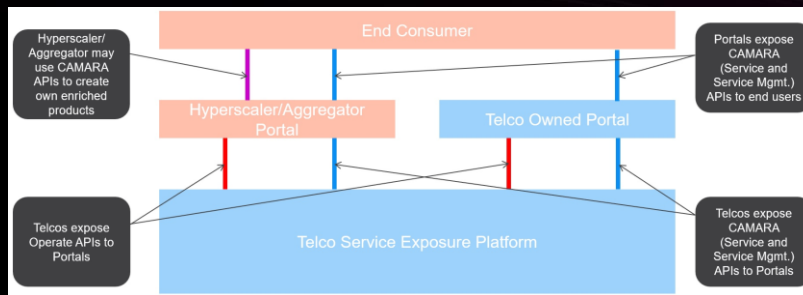

Northbound Scope

Transformation Functions

API Consumption

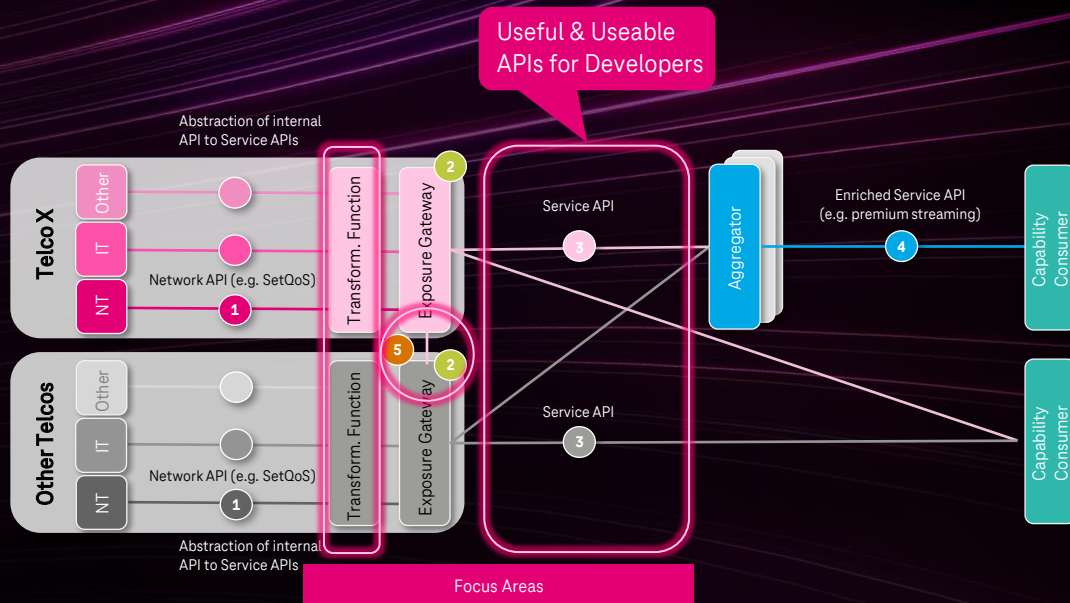

Scope – another perspective

To publish harmonized APIs that expose Telco Network Capabilities by defining Service APIs that hide the complexities of the Telco networks.

CAMARA
THE TELCO GLOBAL API ALLIANCE

1

Capabilities

Exposable via Network APIs
e.g. slicing, positioning,
managed QoS, IDN etc.

2

Exposure

Of Service Functions via Service
APIs. Common means of access
across all operators

3

Service APIs

Service APIs incl. also access
control, billing, cross-operator
federation etc.

4

Technical Aggregation (optional)

Enrichment of Service APIs e.g.
cloud or platform providers, etc

5

Interoperability

e.g. API roaming, etc

Standards Differences At a Glance

			
API Focus N↔S (North↔South) E↔W (East↔West)	N↔S Hosts E↔W from GSMA	N↔S	Some N↔S Primarily E↔W
Developer Persona(s)	“End Developer” – Enterprise or Mobile	Telco Ecosystem Enterprise	Enterprise
Domain Knowledge	Some networking; goal is to require as little domain knowledge as possible	Networking and telco	N↔S: telco E↔W: strong telco
Level of API aggregation	High	Low	Medium

This view is one way to see differences and not reflective of official positions of any company or standards organization.

Work in Progress

APIs derived from GSMA Mobile Connect

Number Verification

Allows users to verify the phone number of the connected device

Device Identifier

Check the identity of the subscribers' device

OTP Validation

To offer secure user authentication to service providers.

SIM Swap

Allows users to get information on SIM pairing changes

How many APIs?

- Each subproject is an API family that can be a few or many APIs.
- The expected quantity of APIs is 100s for CAMARA (not thousands) but this is directly proportional to the effort put into CAMARA.

Active APIs

- Quality on Demand
- Device Location
- Device Status
- Edge Cloud
- Home Devices QoD
- Carrier Billing Checkout
- Blockchain Public Address

Recently Approved APIs

- Click-to-Dial
- WebRTC Calling
- Know Your Customer (Match & In)

Proposed (Under Review)

- Site-to-Cloud VPN
- Device Swap
- IMEI Fraud
- Network Insights

* *Blind spot – Private Network APIs and impacts*

Additional Efforts

- API Design Guidelines
- Consent Management Framework
- Marketing & Outreach
